

SkymRestaurant Management System UI Specification

1. Introduction

This document outlines the basic user interface (UI) specification for the SkymRestaurant Management System. The system leverages stored procedures and views to manage customer orders, menu items, staff, and reporting.

2. General Requirements

- **Responsiveness:** The UI should be responsive and accessible on multiple devices, including desktops and tablets.
- **Consistency:** The UI should have a consistent look and feel, with a unified color scheme and button styles.
- **Navigation:** The system should have an intuitive navigation structure.

3. Main Navigation

The main navigation menu should be available on the left side of the screen (sidebar). It includes the following sections:

- Dashboard
- Orders
- New Order
- Active Orders
- Order History
- Menu
- Staff
- Reports

4. Dashboard

Components:

- **Summary Cards:** Display key metrics such as total earnings and number of orders.
- **Recent Activities:** List of recent activities like new orders and updates to the menu.

5. Orders

5.1 New Order

Fields:

- **Customer Information:**
 - **Name:** The full name of the customer.
 - **Phone Number:** Contact number for the customer.
 - **Customer Type:** Dropdown to select the type of customer (In-Person, Delivery).
- **Order Details:**
 - **Table Number:** If the order is for dine-in, this field captures the table number.
 - **Menu Items:** A dynamic list where each item includes:
 - **Item Name:** Name of the menu item.
 - **Quantity:** Number of units of the item ordered.
 - **Action Buttons:**
 - **Add Item:** Button to add a new item to the order.
 - **Submit Order:** Button to finalize and submit the order.
 - **Cancel:** Button to cancel the order creation process.

5.2 Active Orders

Components:

- **Order List:**
 - **Customer Name:** Name of the customer who placed the order.
 - **Order Type:** Indicates whether the order is for In-Person or Delivery.
 - **Time Placed:** The time when the order was placed.
 - **Action Buttons:**
 - **Mark as Completed:** Button to mark the order as completed.
 - **Cancel Order:** Button to cancel the order.

5.3 Order History

Components:

- **Order List:**
- **Customer Name:** Name of the customer.
- **Order Type:** Indicates whether the order was for In-Person or Delivery.
- **Total Price:** Total cost of the order.
- **Date Completed:** The date when the order was completed.

6. Menu

6.1 View Menu

Components:

- **Menu List:**
- **Name:** Name of the menu item.
- **Price:** Price of the menu item.
- **Count:** Number of times the item is available or has been ordered.
- **Action Buttons:**
- **Add New Item:** Button to open a form for adding a new menu item.
- **Edit Item:** Button to edit the selected menu item.
- **Delete Item:** Button to delete the selected menu item.

7. Staff

7.1 View Staff

Components:

- **Staff List:**
- **Name:** Name of the staff member.
- **Role:** Role or position of the staff member within the restaurant.
- **Action Buttons:**

- **Add New Staff Member:** Button to open a form for adding a new staff member.
- **Edit Staff:** Button to edit the selected staff member's details.
- **Delete Staff:** Button to delete the selected staff member.

8. Reports

8.1 Basic Reports

Components:

- **Report List:**
- **Daily Earnings Report:** Generates a report of earnings by day.
- **Top Customers Report:** Generates a report of top customers based on orders.

8.1.1 Daily Earnings Report

Columns:

- **Date:** The date for which the earnings are reported.
- **Total Earnings:** Total amount earned on that date.
- **Number of Orders:** Total number of orders placed on that date.
- **Average Order Value:** The average value of orders placed on that date.

8.1.2 Top Customers Report

Columns:

- **Customer Name:** Name of the customer.
- **Total Orders:** Total number of orders placed by the customer.
- **Total Amount Spent:** Total amount spent by the customer.
- **Last Order Date:** Date of the most recent order placed by the customer.

9. Common Components

- **Header:** Displays the system name and provides quick access to system alerts and notifications.
- **Notifications:** Popup notifications for system alerts, errors, and confirmations.

10. Accessibility and Security

- **Keyboard Navigation:** All interactive elements should be accessible via keyboard.

This UI specification provides a streamlined interface for the SkymRestaurant Management System, focusing on the core functionalities required for managing restaurant operations using stored procedures and views, without any user roles, authentication, or export functionalities.
